Android Developer
Codaphic Sol PVT LTD
January 2017 to September 2018

at Codaphic Sol PVT LTD
• Conceptualize, develop, and test native Android applications, including UI, core functionality, and third-party SDKS
• Integrate Firebase SDK into various apps

* Applications
➢ Home Inspection
* Home inspection app for home inspection. Basically there are two apps and a web admin panel one is for admin one for inspector and a admin panel for admin.
1. Admin App
• From that admin can add, new inspectors and delete new inspector also view the inspector
• The Core Function of this app is assign daily tasks to registered inspectors.
• Once admin assigns a task to an inspector a push notification delivered to that inspector and he can view today task

2. Inspector App
• This app is for inspector from that inspector.
• From that app inspectors can login and check their daily task
• There is a to do list and location where inspector have to inspect
• Once inspector have their inspection he/she can start inspecting the house
• If inspector find something broken, he/she take a picture and send to the admin through firebase server
• If respective object is in good condition inspector send to admin that object is fine
• After complete the inspection there is option to end inspection after inspection is ended a report is send to admin
3. Web Admin
• This is PHP admin panel for admin to add, view and remove the inspectors and also can view inspectors report
➢ Taxi Booking App
• Basically this almost Uber/Careem clone
• Without messaging and fare calculation
• Have all type of push notifications (booking request, booking request accepted, booking request rejected)

➢ Vending Machine Controlling
• This is for controlling vending machine through android app
• It is based on Adriuno and Bluetooth module.
• Admin can add product to app delete products.
• When client comes to vending machine he/she click on products app ask for payment for selected products. (payment is done through Sqaure Point of sale SDK form which client scan debit/credit card on square point of sale device which is connected to app) once payment is made successfully app sends signal to vending machine and vending machine the selected product.
